Summary

My greatest strength is in being able to analyse a situation and pull together creative solutions by understanding how a wide range of resources work. This means a deeper understanding of the advantages (or disadvantages) of one implementation over another and enough knowledge and experience to be able to roll up the sleeves and problem-solve when necessity dictates.

Education

2014	Startup Leadership Program	Fellowship
2000	Macarthur Business Enterprise Centre	Cert. IV – Business Management
1998	University of New South Wales	MA – Cognitive Science
1996	University of New South Wales	BSc – Science and Mathematics (CS major)

Skills Matrix

Highly Proficient	PHP, OOP Best Practices, Laravel, PSR-12, REST, MySQL, AWS, Atlassian, VPN
Competent	Docker, Vagrant, CI, Bootstrap, jQuery, React, NginX, JWT/OAuth, NoSQL, UAT, TDD, Postman docs
Some Exposure	Typescript, Node.js, Java, ElasticSearch, CORS, Swagger, Python, Machine Learning, Lucene, SOAP, AMQP

Experience

Banxa	Mar 2022 –
Senior PHP Developer, Platform Engineering, Backend Lead	
Primarily using the Laravel framework, working with small team dedicated to "core" back end processing of Crypto Payment Services to consumers and leading Exchanges worldwide as well as supporting all relevant back of house processes, specifically looking after the Pricing engine. Maintaining and improving solution designs for the product architecture, including scalability and resilience to high volume and optimisation of processing load. Evaluation of new technologies and ideas that can be leveraged to improve the platform.	
Laravel, Docker, Yarn, REST, GitLab, PHP7, PHP8, phpunit, MySQL, Slack, Postman, AWS, JIRA, Confluence, VPN, PHPStorm	

Senior PHP Developer, DevOps, BA

Heading up the “Bespoke Projects” dev team, running a team of (overseas) remote devs and also doing dev work as needed. Introduced unit testing and encouraged test-driven development as well as Best Practices and modern coding standards. Created many projects from scratch, working in a mix of environments including working within CMS environments provided by clients. Delivering products either as Docker images for containerised deployments or as packages within the CMS or sometimes entirely self-contained microsites – involving a complete CI solution from git commit to fully functioning Production website running on scalable AWS infrastructure. Also technical consultation and quoting on client briefs, including scoping and assessment of available resources.

Laravel, Typescript, React, Node.js, REST, Docker, Vagrant, Azure, GitHub, PHP 7.4, PHP 8.1, phpunit, jest, Slack, Postman, AWS, JIRA, Asana, Facebook Graph API/Javascript SDK

Senior PHP Developer, DevOps

Primarily using the Laravel framework, working on both the flagship *eWallet* product as a back-end developer, as well as heading and maintaining the *Engagement* platform, which is utilised by eWallet as well as directly by Loyalty Corp clients, as a full stack senior developer and operations manager. Both products involved managing AWS resources and assets as well as code reviews and deployments to testing, UAT, and Production resources. The latter also required building a front-end for management of the Gamification projects used by Engagement clients – allowing self-service solutions for building and maintaining Rules, Rewards, Tiers, etc – as well as a Single-Sign-On solution, a Wordpress plugin, and even an iFrame solution for delivering in-app content using JS and Amazon S3.

Laravel, Lumen, jQuery, Angular, Bootstrap3, Bower, Gulp, REST, SOAP, GraphQL, CORS, OAuth, JWT, ssl/bash, NginX, MySQL, DynamoDB, PHP7, Node.js, SQS, PHPUnit, Vagrant, Docker, Papertrail, Slack, Postman, Wordpress plugin development, JIRA/Confluence/Bitbucket/etc, AWS, VPN, PHPStorm

Senior Web & App Developer, IT Administrator

Full Stack Senior Developer, working across teams in both Melbourne and Adelaide. Directly liaised with stakeholders ranging from clients to external developers to service providers, ensuring smooth delivery which matches expectations as well as limitations of scope. Managed servers and databases and also internal IT systems. Due to noteworthy eye for design and creative flair, consulted on projects in need of a new look or 'jazzing up' - occasionally, completely rebuilt website from the ground up. Managed and developed both web and native mobile applications, managed dev team and external developer assets, as well as private git repositories. Implemented REST API services, managed and deployed AWS assets, administered linux-based servers, including MySQL-based databases. Developed and implemented **bank-level** security practices for a FINTECH application with major Australian banking partner. Introduced new collaboration tools, such as Slack and Basecamp. Delivered VPN solution to allow secure access to sensitive data, outside of the office and trained staff how to set up and use it.

HTML5, CSS3, Java, Objective C, Javascript, jQuery, OAuth, ssl/bash, Apache, MySQL, PHP5, git, cPanel, composer, Wordpress plugin development, Google API, GIMP, Slack, Basecamp, PHPStorm, xCode, Android Studio, VPN, Google/Apple app stores, AWS

Senior Developer, Webmaster, Systems Administrator, Database Manager, Lead Designer

Lead front and back end developer, working with front end design team on eLEDGER product. Managed both production and development servers, including database design, security and administration of internal/external access. Managed customer data, feature-rich billing and payments system, as well as cloud-based collaboration tools. Oversaw management of Sales and Support enquiries, including maintenance of customer self-help knowledgebase and associated tutorial system. Developed mobile app on both iOS and Android platforms to bring fully integrated products into both iTunes and Google Play app stores, complementing the existing mobile device integration of the web UI. Delivered oauth implementation of Google, Outlook, Exchange, and Yahoo APIs.

Java, Javascript, HTML5, CSS3, AJAX, cron, mailer daemon, git, oauth, ssl/bash, Apache, MySQL, PHP5, PEAR/Imagemagick/fPDF, xCode, Android Studio, Wordpress, GIMP, Libre Office

PHP Developer, Systems Administrator, I.T. Consultant

Systems design and troubleshooting for SME customers, with particular emphasis on (front end) multi-platform compatibility and accessibility, as well as (back end) process work flow. Worked both as part of dev team and sometimes solo, including patching of legacy code.

CodeIgniter, HTML4, CSS3, AJAX, XML, SOAP, JSON, Javascript, IIS, ssl/bash, Apache, MySQL, PHP5, Photoshop/GIMP, Microsoft Office, Microsoft Exchange, git, cpanel
